

Chain-of-Thought (CoT) Prompting - Learning Notes

Introduced by Wei et al. (2022), Chain-of-Thought Prompting improves AI reasoning by generating intermediate reasoning steps before the final answer.

Key Benefits

- Better reasoning
- More reliable outputs
- Personalized solutions
- Better decision-making

Few-Shot CoT

Provide examples with reasoning steps so the model learns how to think before answering.

Zero-Shot CoT

Adding "Let's think step by step" often improves reasoning without examples.

Auto-CoT

Auto-CoT automatically generates reasoning demonstrations using question clustering and demonstration sampling.

Learning Summary

CoT Prompting helps AI solve complex problems through structured reasoning, making outputs more accurate and explainable.
